### **STATEMENT:**

Our State constitution mandates that democratically elected representatives craft laws and make budget decisions. I am deeply committed to preserving this form of government and making it serve our citizens well.

Alaska's economy is driven by Natural Resources such as oil, gas, minerals, forest products, and fish. I have made the responsible development and utilization of those resources my highest priority, and I will continue to do so. My work in the oil and fishing industries has been useful.

We can expand the Alaska economy and grow our way out of the current financial deficit. I expect we will get a gas pipeline and explore for oil in ANWR in the future. If world oil prices do not stay up, there will have to be more streamlining and reduction in State spending and consideration of other State revenue sources. I will not support a State income tax, and I will continue to protect the Permanent Fund and the dividend program.

Protecting families and children is very important to me, and I have worked to revise Alaska's child and family protection laws and to improve the work of State agencies that have jurisdiction. More work is needed, and I will continue efforts to make our homes and children safe and healthy.

My staff and I will continue working to make State government serve the people of Alaska and assisting citizens in our district as they deal with local and state government.
